

PUBLIC SAFETY SOLUTIONS

SOLUTIONS FOR PUBLIC SAFETY

Communicate with Confidence

Now entering its fifth decade, Tait designs, manufactures and deploys radio systems; providing ongoing support services to public safety agencies throughout the world. The Tait team adopts the same ethos as police, fire and first responders: we don't abandon those in need. Tait continues to stand shoulder-to-shoulder with our public safety customers, ultimately resulting in safer citizens, empowered officers and greater community trust.

From Sao Paulo, Brazil, to South Africa, and from Texas to Ontario, public safety customers are benefitting from Tait's commitment to listen, courage to act and integrity to deliver what is promised.

Interoperable critical communications

Tait enables public safety agencies to:

- Respond with confidence and control in the face of unpredictable and fast-changing situations.
- Co-ordinate operations with other agencies through seamless interoperable communications.
- Deploy tough, dependable radios which are proven across the world.
- Combat organized crime and enhance officer safety by managing encryption to ensure that communications are totally secure.
- Secure best value through multi-vendor procurement: open standards and proven cross-manufacturer operation allow greater leverage of current assets.
- Choose from readily-customized radios, comprehensive accessories and flexible configurations.
- Benefit from long-term, ongoing support and services from an enduring partner.

Tait offers a range of network options for public safety designed to match your organization's needs: simulcast, multicast, trunking and conventional solutions in analog or digital modes.

The total solution

When you need one organization to specify, install and support your radio systems it helps to know Tait delivers the total package. Tait produces the full range of 700/800 MHz/UHF/VHF portables, mobiles and base stations/repeaters. Comprehensive accessories, rapid deployment radios and covert equipment can round off a complete turnkey solution.

Making interoperability a reality

Seamless roaming and backwards analog capability enable smoother incident response and greater co-operation across various agencies. Tait digital radios are proven to work on other manufacturers' networks and Tait networks can support other manufacturers' terminals, so customers can secure value in a multi-vendor environment.

Tough radios for a tough job

Officers depend on their radios to keep themselves and the public safe. Tait Tough radios are tested beyond military standards for durability and performance. Digital audio clarity is vital in life-or-death situations. Because Tait radios are easy to use, officers can focus on the task at hand instead of becoming radio specialists.

Open standards for easy integration

Because Tait solutions are based on global open standards they are readily integrated with a wide variety of dispatch consoles, mobile data, AVL/GPS platforms and other third party solutions. Agencies remain free to choose without being "locked in".

Coverage that you count on

Public safety agencies need their network solution to be reliable and flexible no matter what the challenges of their terrain. Designing in redundancy, phasing in upgrades, delivering world-class training and supplying high-performance customizable radio equipment are core competencies of Tait, so you can commit with confidence.

Manage encryption efficiently and effectively

Secure operations are proven to improve effectiveness of the squad and safety of the officers. Not only can Tait radios use the most advanced encryption available, Tait in-field, over-the-air and back office encryption management applications improve workflow and productivity when changing encryption keys for different teams' radios.

Manage complex and dynamic organizations

Modern public safety organizations are always on the move. Inter-agency teams and task forces often have changing communications needs across many vehicle types. Because Tait makes it easier to programme radios, manage call groups and reconfigure networks, agencies can focus on getting the job done.

The right fit for public safety

Tait is solely focused on radio communications and specializes in the unique needs of public safety agencies. Talk to us. We will listen!
